SUPPLEMENTARY NOTES 12a, DISTRIBUTION / AVAILABILITY STATEMENT 126 DISTRIBUTION CODE Available to the public. 13. ABSTRACT (Maximum 200 words) This MTS of the 7th QRMC combines the individual recommendations of the ORMC into an integrated whole and proposes options for moving to a revised pay and allowances system. The QRMC's proposals call for significant changes to individual pay elements but result in levels Regular Military Compensation (RMC) not much different over a career from today's career earnings. The differences lie in when, how much, and for what reason a member receives increases in pay throughout a career. Although transition could occur in stages over multiple years, the QRMC recommends a one-year transition to an improved pay and allowances system.

INTEGRATION AND TRANSITION

7th QRMC Major Topical Summary (MTS) 6

August 1992

Integration and Transition Major Topical Summary (MTS) 6

A staff paper of the Seventh Quadrennial Review of Military Compensation August 1992

Office of the Assistant Secretary of Defense (Force Management and Personnel) The Pentagon, Room 3E764 Washington, DC 20301-4000

7TH QRMC STAFF ANALYSES

The full set of the 7th QRMC study documentation includes this report and the 7th QRMC Staff Analyses, which form a series of stand-alone reports. The reports in the Staff Analyses provide detailed facts and logic of interest to the small audience of staff specialists who may require a more complete understanding of the findings and recommendations in our official report.

There are two types of documents in the Staff Analyses: Major Topical Summaries (MTSs) and Global Subject Papers (GSPs). MTSs cover primary areas of investigation, such as basic pay and allowances, while GSPs cover either theoretical considerations, such as the principles of compensation, or special research subjects, such as foreign military compensation systems. All other QRMC staff documents are internal working papers that do not necessarily represent the official views of the QRMC. The Staff Analyses consist of the following documents:

MAJOR TOPICAL SUMMARIES (MTSs)

Compensation Structure MTS
Basic Pay
Allowances MTS
Special and Incentive Pays
Annual Pay Adjustment
Integration and Transition
GLOBAL SUBJECT PAPERS (GSPs)
Foreign Military Compensation Systems Review
The Target Force
Modeling, Logic, and Theory GSP
Tax Issues
Cost Analysis Methods
Principles of Military Compensation
Drawdown GSP (
Service Comments on the Draft Report

CHAPTER 1—OVERVIEW

INTRODUCTION

The preceding Major Topic Summaries (MTSs) describe the 7th QRMC's findings and recommendations with respect to the various individual elements of military compensation. This MTS discusses in detail our proposals for combining the individual recommendations and options for moving to the revised set of pay and allowances. Thus, the reader may view the results of the QRMC study as an integrated plan. In fact, we made every attempt to ensure that the recommendations made sense from the standpoints of both the individual elements of compensation and the system as a whole. The goal was to develop a consistent and cohesive integrated plan to improve recruitment and retention of top-quality service members.

Of course, any change from the status quo, be it minor or major, will involve transition challenges. Furthermore, there are cost ramifications to consider. While we did not strictly constrain ourselves to no-cost solutions, we did look very hard at ways to take existing resources and better focus them—targeting the right people to be paid the right amount of money. Our analysis of transition options also emphasized the impacts on current service members.

The total cash paid to an individual service member currently varies based on five major factors: grade, time in service, dependency status, availability of government quarters, and location. Moreover, total pay can be affected by a number of special and incentive pays and individual allowances. To represent the pay of the average service member, we used Regular Military Compensation (RMC)—the standard and generally accepted measure for comparing military and civilian pay. RMC consists of basic pay, the basic allowance for subsistence (BAS), the average value of the total housing allowance, and the tax advantage associated with these allowances. Although any given service member's actual pay does not necessarily equal RMC, it is a fair representation of their average aggregate income.

Chapter 2 discusses the integration of the RMC component proposals in detail. Chapter 3 develops the transition alternatives.

RESULTS IN BRIEF

Integration

The QRMC's integrated plan is both cohesive and consistent. The revised pay and allowances will make sense to service members and will encourage productivity through increased emphasis on promotion. Table 1-1 shows the proposed pay table projected to 1994, if all of the QRMC recommendations are implemented in that year. It assumes the currently projected pay raises for both 1993 and 1994, and incorporates a "fixed" BAS, a housing allowance floor, and a restructured basic pay table. Note that all members would receive the same BAS and that the indicated total housing allowance is actually an average of the regional allowances. Housing allowances would have to be published by military housing areas, as the Variable Housing Allowance (VHA) tables are published today. We chose 1994 because it is the first year that the QRMC recommendations could be implemented. The proposals could just as well be implemented in any succeeding year.

The QRMC proposals call for significant changes to the individual pay elements but result in total levels of RMC that would not differ much over a career from today's career earnings. The difference lies in when, how much, and for what reason a member receives an increase in pay as he or she moves through a career. Figure 1-1 shows the components of the monthly RMC of a typical officer, for example, at any given year of service. The BAS, shown in black, is based on the cost of food. The housing allowance, shown in white, provides for at least a minimum level of adequate housing. Basic pay, by far the most significant component, consistently emphasizes promotion increases over longevity increases. Note that the pay line over the career is not smooth. Each of the large steps on the graph represent a distinct promotion point, O-2 through O-6.

Transition

Transition to an improved pay and allowances system can be accomplished in one year, or in stages over multiple years; a third possibility would be to treat most of the pay table cells in one year and only selected pay table cells over multiple years. The QRMC's intent was not to define an optimal detailed transition plan. Rather, our purpose was to demonstrate that it is possible to move to a restructured pay and allowances in a smooth, understandable manner that generally leaves service members unharmed in the process and makes sense from DoD management and financial perspectives. All changes would coincide with annual pay raises. We developed one-, two-, and three-year transition plans.

The one-year option would minimize the period of force disruption, but would potentially involve the greatest "save-pay" costs. The three-year transition plan would have

¹"Save-pay" refers to the criterion that no member's pay should decrease as result of pay table revisions. Each member would be paid the higher of his or her current pay or the level in the new pay table.

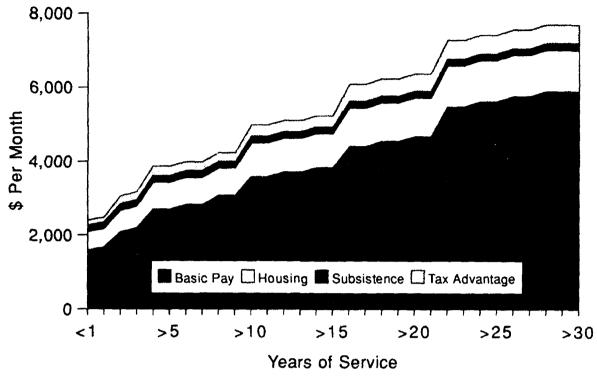

Figure 1-1. Components of a typical officer's monthly RMC(1994)

the least impact on any particular member and not require save pay. It would, however, prolong the transition and any associated disruptions.

Tables 1-2 and 1-3 show how the one- and three-year transitions would affect the pay cells of the majority of the members in the active duty force. The entries in each cell represent the percentage change from a projected current pay table in 1993 to a restructured table in 1994. The housing floor, not shown, would significantly increase the housing allowance for junior enlisted members. The BAS rate would increase or decrease by the amount shown from its projected 1993 levels. The outlined cells in Table 1-2 would require save-pay provisions or some special consideration of the relatively low pay raise that would otherwise occur. The same outlined cells in the three-year transition, shown in Table 1-3, would not require save pay but could still require special consideration.

The 7th QRMC recommends using a one-year transition to implement our near-term proposals.

CHAPTER 2—INTEGRATION

INTRODUCTION

This chapter discusses how the 7th QRMC would integrate the separate recommended components of RMC.¹ First, the recommendations for each component of RMC are briefly reviewed, then the effects of the changes on service members' RMC are examined. The rationale for the recommended changes to each of the RMC components may be found in the MTSs on Basic Pay and the Allowances.

RMC as a Comparative Measure

RMC is the standard measure for comparing military with civilian pay levels. It takes into account the value of in-kind housing and subsistence, an averaged locality housing adjustment, and the value of tax savings on tax-free allowances. Although at any time the actual level of pay for most service members will not equal their RMC, it is an appropriate representation of average aggregate income.

Methodology

In the analysis, the recommended (proposed) pay rates are compared to the existing (current) pay rates. Rates are projected in 1994 dollars, applying the full Employment Cost Index (ECI) to basic pay, basic allowance for quarters (BAQ), and BAS.²

Data are examined both in a *cell-by-cell* format (arrays of pay grade and longevity steps) and as *typical* career patterns. Separate career patterns are used for enlisted members, officers, prior-service officers, and warrant officers. Because of the many combinations using the cell-by-cell format, most of the analysis is presented using the career pattern format. Represented over a 30-year period, the *typical* career pattern for each of the four pay grade groups is defined based on the following assumptions:

¹Regular Military Compensation is the sum of basic pay, the basic allowances for housing and subsistence, and an average value for variable housing allowances, plus the tax advantage associated with the allowances.

²The military annual pay increase is currently linked to the General Schedule (GS) for federal employees, which is indexed at the full ECI. Beginning FY 1994, the GS pay raise will be indexed to ECI minus one half of 1.0 percent, with 0.5 percent funding their locality-based comparability payment. The QRMC recommends that the military pay raise continue to be indexed by the full ECI.

- Enlisted members. Promotions are based on projected Department of Defense (DoD) average timing, using weighted averages in the years when promotions occur. For example, promotion to E-4 is projected to occur at 2 years and 3 months of total service; therefore, the data for the typical career pattern for the second year of service consists of $\frac{3}{120}$ at the E-3 pay rate and $\frac{9}{120}$ at the E-4 pay rate.
- Officers. Promotions are based on established Defense Officer Personnel Management Act (DOPMA) guidelines.
- Prior-Service and Warrant Officers. A typical career pattern cannot be developed to fairly represent the large pay dispersion for these officers. They normally have prior time in service, thus entering the pay table in varying pay cells. Also, prior-service officers will move to the normal officer pay table once they reach O-4. The data for these officers are displayed as a weighted average of pay, or pay change, for all of the officers in each year of service.

Table 2-1 depicts the enlisted member promotion timing points as well as the DOPMA promotion guidelines for officers. Table 2-2 depicts the population distribution by years of service (YOS) within each of the pay grade groups. Table 2-3 depicts the population distribution by grade.³

Assumptions about dependency status, as it affects housing allowances, are based on average distributions of married and single DoD service members from FY 1991. Table 2-4 depicts these distributions. From these single and married data, with and without dependency statuses are derived to apply to housing allowances. A weighted average housing allowance is used in this analysis.

To project data to 1994 from the current 1992 pay tables, the following indexes were used. For basic

Table 2-1. Promotion timing phase points

Rank	Year/Month

pay, BAQ, and BAS, projected military pay indexes (MPIs) of 3.7 percent and 4.3 percent were applied to 1993 and 1994, respectively. While monthly basic pay and BAQ rates were rounded to be evenly divisible by 30, monthly BAS was computed from a daily rate. Average

³Derived from FY 1990 end strength data provided by the Defense Manpower Data Center (DMDC) in response to a QRMC inquiry.

^{&#}x27;Marital distribution data were derived from Selected Military Compensation Tables: January 1991 Pay Rates, Department of Defense, Office of the Assistant Secretary of Defense, (Force Management and Personnel), Military Manpower and Personnel Policy (OASD (FM&P), MM&PP), Directorate of Compensation, p. A5; data as of 1 Jan 91.

VHA rates and the United States Department of Agriculture (USDA) food cost rates were projected using Consumer Price Index (CPI) values of 3.7 percent, 3.8 percent, and 3.6 percent, for 1992, 1993, and 1994, respectively.

The definition of RMC assumes a cash equivalent value for in-kind subsistence and housing. RMC equates the value of subsistence in kind to BAS, and the value of quarters in kind to BAQ plus average VHA.

COMPONENTS OF RMC

Housing

Projections of current BAQ and average VHA rates are detailed in Table 2-5 and Figure 2-1. The QRMC's recommended change, for the purpose of this analysis, affects only the minimum level of housing allowances (establishment of a housing floor).⁵ As can be seen in Figure 2-1, the increases primarily affect the lower ranks of each group; higher ranks experience little or no change. As stated earlier, the value of government housing for RMC computation was set equal to the total housing allowance.

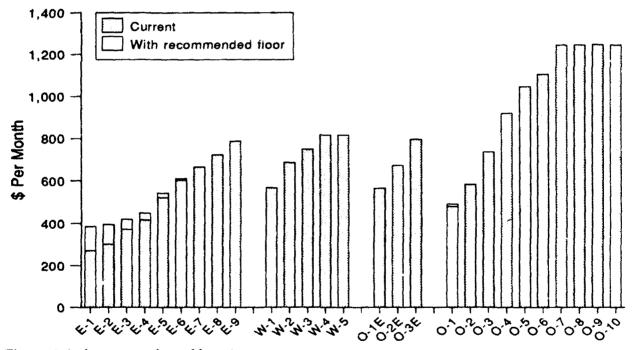

Figure 2-1. Average value of housing

See the 7th QRMC "Allowances" Major Topic Summary, Chapter 4 (Housing Allowances) for a complete discussion of housing allowance recommendations.

Subsistence

The integration of our BAS recommendations will affect both the BAS rate and the basic pay levels. The QRMC recommends setting BAS equal to USDA food costs. Thus, enlisted BAS must be reduced from current levels and officer BAS increased. To preserve current compensation levels, the reduction in BAS for enlisted members should be transferred to basic pay along with the computed reduction in tax advantage, and the increase in officers' BAS should be offset with a reduction in basic pay. However, a dollar-for-dollar exchange between BAS and basic pay would result in an inappropriate change to a member's future retirement pay and an unwarranted increase in pay for members who receive subsistence in kind. Thus, discounted trade-offs should be made between current cash and deferred retirements where necessary.⁶

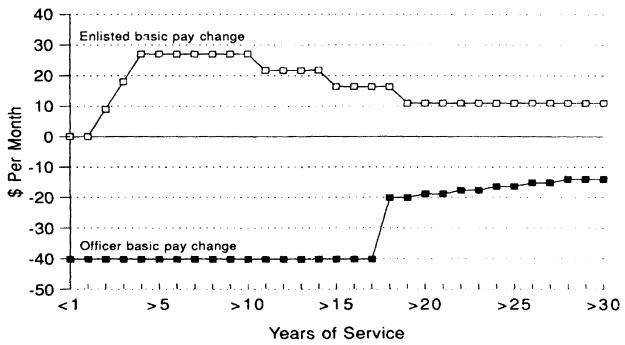

Figure 2-2. Changes to basic pay resulting from the BAS recommendations

The projected USDA food cost in 1994 is \$185.60 per month; whereas BAS projections at current rates are \$207.9\(^2\) for enlisted members and \$145.39 for officers. Because the proposed BAS rate will equal the USDA food cost, enlisted BAS will be reduced by \$22.33 per month, and officer BAS will increase by \$40.21. Table 2-6 and Figure 2-2 depict these rates and the actual amounts applied to or taken from basic pay. In the RMC computations, the value of subsistence in kind is set equal to the BAS rate.

⁶See the 7th QRMC "Allowances" MTS, Chapter 3 (Basic Allowance for Subsistence) for a complete discussion of the BAS recommendations.

Basic Pay

The QRMC's recommendations on basic pay, the major change to RMC, are based on reestablishing a proper balance between promotion and longevity. Tables 2-7 through 2-9 show the cell-by-cell basic pay changes by comparing the projected 1994 current and proposed pay tables. The shaded portions on the enlisted and officer tables represent typical career progressions. Figures 2-3 and 2-4 display the points along these shaded lines. Progression lines on Table 2-9 for prior-service and warrant officers are not shown because of the large variance in their grade and longevity combinations. Instead, the lines on Figures 2-5 and 2-6 represent the weighted average of changes in basic pay for these groups. Note that these tables and figures do not incorporate the impact of the BAS recommendations.

The sharp swings depicting the basic pay table changes, although appearing dramatic, actually smooth the pay over service members' careers. This smoothed pay progression is depicted in later figures examining the resulting levels of RMC.

⁷See the 7th QRMC "Basic Pay" MTS for a complete discussion of recommended changes.

Tax Advantage

Housing and subsistence allowances are not taxable. Determining the tax advantage associated with these allowances involves figuring the amount of income necessary to maintain net income if they were taxable. Only federal income tax is considered in computing RMC. To determine the tax advantage, the tax on the allowances is first computed using average tax rates by years of service. If the amount of this tax were paid to service members, it would itself be taxed, requiring an additional amount to be provided to the service member. The total value of the tax advantage is calculated by:

 $Tax \ Advantage = Allowance \times [Tax \ Rate / (1 - Tax \ Rate)]$

Table 2-10 shows the tax advantage rates by pay grade; and Figure 2-7 displays the change in average tax advantage as result of our recommendations.

INTEGRATED EFFECTS ON RMC

So far, we have examined the changes recommended for each individual RMC component. However, it is the combination of all the recommended changes that a service member will see on his or her monthly leave and earnings statement. Thus, the remaining analysis will examine the changes to RMC as a whole.

In this section, several tables and figures analyzing RMC are presented for each pay grade group, as follows:

 Magnitude of the monthly change for each RMC component as affected by our recommendations.

^{*}Tax rate data were derived from Department of Defense, OASD (FM&P) MM&PP, Directorate of Compensation Selected Military Compensation Tables: January 1991 Pay Rates, B4-B6 and C3; data as of 1 Jan 91.

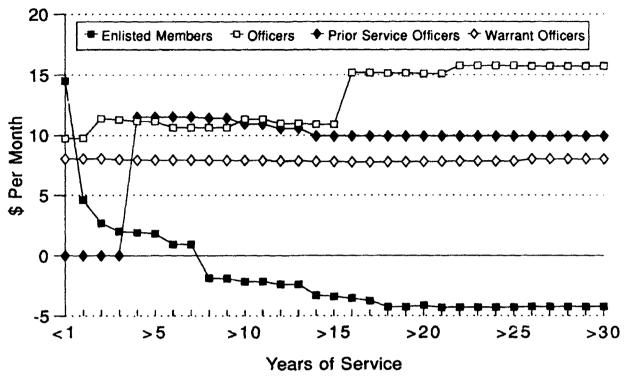

Figure 2-7. Change in average federal tax advantage

- Proposed level of monthly RMC, indicating the proportion attributable to each component.
- Current versus proposed levels of monthly RMC and basic pay.
- Current versus proposed monthly RMC, highlighting the changes illustrated by the previous graphs.
- Average monthly change in future RMC for members who stay through 20 and 30 years of service.
- Average monthly change in RMC and retirement pay for members with over 20 years of service.
- Current versus proposed monthly RMC in a cell-by-cell format.
- Current verses proposed monthly basic pay, in a cell-by-cell format, incorporating the BAS changes.

These tables and figures are analyzed separately by pay grade groups.

Enlisted Members

Figure 2-8 shows the change in each component of RMC for enlisted members. The level of basic pay increases throughout most of a member's career, except at the over-26 years point. The decrease in the over-26 longevity raise has been redistributed between the over-24 and 28-year points. The addition of the housing floor clearly benefits those members at the lower ranks (i.e., lower levels of total income). The effect of reducing BAS to the USDA food cost can also be seen: the reduced BAS amount and resulting loss of tax advantage, as discussed earlier, have been added into basic pay.

Figure 2-9 shows total monthly RMC for enlisted members. In this chart, the noticeable steps are promotion increases. As designed, promotion increases are significantly larger than longevity raises. The E-6 to E-9 promotion steps can clearly be seen. Promotion steps for E-2 to E-5 are not visible because these promotions occur midyear and the monthly RMC was computed from a weighted average of ranks within each year.

Figure 2-10 compares the current and proposed level of RMC and basic pay. In the RMC lines, the large longevity pay raise at the over-26 point, in current RMC levels, has been smoothed over the 24-, 26-, and 28-year points. This smoothing de-emphasizes the effect of the large over-26 longevity raise in the enlisted members' retirement decision. Changes in the basic pay line indicate changes in the level of retirement pay as well. Although the level of retirement pay at the over-26 point decreases, it increases for members who retire earlier and for those with more than 28 years of service.

Figure 2-11 shows the difference in the current and proposed level of RMC on a larger scale, while Table 2-11 shows the levels and changes in RMC in a cell-by-cell format. It should be noted here that members at or near the over-26-year point will not suffer a pay loss. Transition plans discussed in Chapter 3 were designed to preclude this from happening.

Figures 2-12 and 2-13 depict how much a non-retirement-eligible member's average future monthly RMC will change based on his current years of service. Figure 2-12 assumes a member will retire at 20 years; and Figure 2-13, that he will retire at 30 years. As indicated by the first bar on the graphs (less than one YOS), average monthly RMC for new members will increase between \$15 and \$23. For those who are currently in the service and have less than 20 years of service, average RMC will increase except for those between 11 and 14 YOS. These members, as with all members with over 10 years, will receive lower BAS payments in exchange for higher retirement pay.

Figure 2-14 shows the change in RMC and retirement pay for members who are retirement-eligible. All enlisted members will get an increase in their retirement pay. Again, the small reduction in RMC for members who currently have over 26 years is exchanged for increased retirement benefits. The increase in retirement pay can be seen in Table 2-12 as well, which compares the basic pay levels using a cell-by-cell format.

Officers

Components of RMC for officers, as shown in Figure 2-15, reflect a similar change in basic pay at the 26-year point. Most notable is the shifting of money from the 3- to 7-year points to the over-8-year points, especially the O-4 promotion point. The increase due to the housing floor, though not as significant as that for enlisted members, appears in the first 'wo years. The increase in officers' tax advantage, as a result of the BAS change, is also evident.

Figure 2-16 shows the RMC for officers. Each promotion is clearly indicated, as well as the smoothed longevity raises.

Figure 2-17, which compares current and proposed RMC, also reflects how promotion raises have been emphasized over longevity raises. As the basic pay line indicates, retirement pay levels have been kept nearly equal, except for the over-26 longevity raise smoothing. Table 2-13 compares the RMC changes, and Table 2-14 compares the basic pay changes in a cell-by-cell format.

Figure 2-18 magnifies the proposed change in RMC. A reduction in RMC between the third and eighth year is evident. However, increases in RMC over the rest of the officer's career more than recover this reduction.

Figures 2-19 and 2-20 show that the lower over-3 longevity raise has little impact on average career earnings. In fact, new officers staying in the service until retirement will experience an average career increase in RMC of about \$60 per month. Additionally, all officers now in the service will experience an increase in future RMC.

Figure 2-21 shows the RMC and retirement for officers who are retirement-eligible. Officers who retire with less than 26 years of service will see an increase in their retirement pay from the pay table modifications. The slight reduction in retirement pay at over 26 years is in exchange for an increased BAS and tax advantage (i.e., increased RMC before retirement). Those who are near the over-26-year point will be grandfathered to ensure no loss in retirement pay.

Prior-Service Officers

The analysis of prior-service officers' RMC is more difficult to depict because of the variation in when members start and stop using the Officer/Enlisted (OE) pay scale. Officers using the OE scales must have at least four years of prior enlisted or warrant officer service; therefore, they may enter the scale at any point beyond the fourth year. Depiction is further complicated because once these members are promoted to O-4, they transfer to the officer pay scale. Because the OE scale includes only the grades O-1 to O-3, the figures do not reflect a complete career path, but only the period when the officer is below the grade of O-4.

Figure 2-22 shows the average prior-service officer's change in RMC components. The changes in subsistence and tax advantage are similar to those for officers. The housing floor is not a factor because the average prior-service officer's housing allowance exceeds the housing floor. The change in basic pay reflects the linkage of the OE table to the officer table. Where the pay at the lower end of the officer table has been somewhat reduced, it is also reflected in the OE table. This reduction appears exaggerated in Figure 2-22 where only pay grades O-1 to O-3 are shown.

Figure 2-23 shows the RMC levels for prior-service officers in grades O-1 to O-3. The variation of entry points onto the OE tables hides the promotion raises that were distinct in the enlisted and officer figures. Figures 2-24 and 2-25 compare the current and proposed RMC and basic pay levels, showing that officers who enter the OE table and remain there after year 16 would earn a higher lifetime RMC than now. Tables 2-15 and 2-16 show these changes in RMC and basic pay using a cell-by-cell format.

Figure 2-26 compares current and proposed RMC levels along two hypothetical career paths for prior-service officers. One set of lines depicts a notional career path for an officer with four years of prior enlisted service; and the second set, for an officer with 10 years of prior enlisted service. The notional career paths assume that both officers followed current DoD enlisted promotion timing and DOPMA promotion guidelines.

Figures 2-27 and 2-28 depict the cumulative average change in RMC for 20- and 30-year careers. Again, this chart applies to only the members in grades O-1 to O-3. Because the significant increase at the O-4 promotion (which occurs at about 10 years of commissioned service) is not included, the average change for members below the tenth YOS is not totally represented. RMC will be higher in these years for those who are eventually promoted to O-4. While the prior-service officer's RMC would decrease somewhat in the early commissioned years, average RMC will increase for those who make the military a career.

Figure 2-29 shows the change in RMC and retirement pay for prior-service officers who retire below the rank of O-4. These members would all enjoy a substantial increase in their retirement pay. The basic pay changes and increase to retirement levels are shown in a cell-by-cell format in Table 2-16.

Warrant Officers

Warrant officers, like prior-service officers, enter their pay table at varying years of service; however, they normally keep using that pay table throughout the remainder of their careers.

Figure 2-30 shows the change in components of RMC for warrant officers. The changes in the housing and subsistence components mirror those of the prior-service officers' RMC. Basic pay is reduced in the early years, primarily to fund the increase in the subsistence allowance.

Figure 2-31, which shows the average RMC for warrant officers, again hides the promotion increases because of the varying entry points.

Figures 2-32 and 2-33 compare current and proposed changes to RMC. Warrant officers' RMC decreases slightly in the entry point years, while increasing later. The average crossover occurs during year 15. Retirement levels, as can be inferred from basic pay shown in Figure 2-32, remain about the same or increase for warrant officers. Additionally, promotions to the new pay grade of W-5 are not incorporated into these averages because the population distributions used contained no W-5 pay grade.

Figures 2-34 and 2-35 indicate the average change in future RMC for warrant officers. In nearly every case, average RMC will increase for career warrant officers. Two-thirds of the warrant officers enter the pay table after the over-6 YOS point, and half enter after the over-9 YOS point.

Figure 2-36 shows the RMC and retirement change for retirement-eligible warrant officers. Retirement pay will increase for most of these officers or will be nearly equal.

Tables 2-15 and 2-16 compare the changes in RMC and basic pay for warrant officers using a cell-by-cell format.

INTEGRATION AND TRANSITION

CHAPTER 3—TRANSITION

INTRODUCTION

This chapter analyzes transition alternatives for implementing the QRMC recommendations. The following transition options are examined:

- Incorporation of changes in a single year, coinciding with the January 1994 annual pay raise.
- Incorporation of changes in near equal amounts over multiple years. Two-year (January 1994 and 1995) and three-year transitions (January 1994 through January 1996) are presented.
- A modified one-year transition option, incorporating most changes in a single year, but stretching significantly large changes over multiple years.

Methodology

For each option, the recommended percentage changes in basic pay and RMC are compared to the projected unrevised annual pay raise for the transition year. In each transition year, the full projected ECI pay raises of 4.3 percent, 4.1 percent, and 4.0 percent for 1994, 1995, and 1996, respectively, are used.

Tables on basic pay and RMC have been developed for each option. These compare annual pay raises in a cell-by-cell format. Each table shows the transition-year pay level, the previous year's pay level, and the percentage change. Separate tables are included for enlisted members, officers, and prior-service and warrant officers. These sets of tables are attached in Appendices A through C.

As well as indicating changes to retirement pay, the basic pay tables indicate the impact on monthly pay for members who receive subsistence and housing in kind. A major weakness of examining only basic pay changes is that the impact on the majority of service members who receive cash allowances is not revealed. For this reason, the percentage change in RMC has been calculated to give a fuller indication of the overall impact. Even though some members do not receive cash allowances, the RMC tables account for the changes in the value of housing and subsistence provided in kind.

Figures 3-1 and 3-2 show the proportion of enlisted members and officers who receive housing allowances versus those living in government quarters. Figure 3-3 shows the proportion of enlisted members who receive the subsistence allowance versus food in kind. All officers receive BAS.

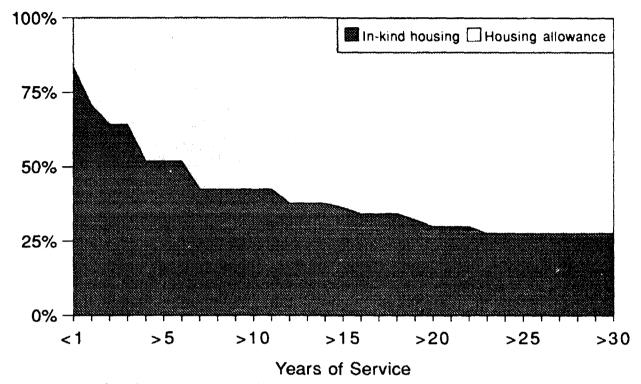

Figure 3-1. Enlisted members' in-kind housing and housing allowance ratio

Why Is Transition Required?

Our proposed corrections in the structure of the pay table would transfer money from longevity raises, which were too large, to inadequate promotion and longevity raises. By design, the recommended basic pay tables generally equalize the longevity pay raises within each grade, and make promotion raises larger than longevity increases. As a result, the level of pay in some pay table cells would decrease, while increasing in others. A transition plan is needed to ensure that no member experiences a pay cut as a result of restructuring the pay table.

Once the transition plan has been implemented, members who then move into a new pay cell (by virtue of time in service or promotion) would realize the full intended pay raise. However, if a mid-year switch to the new pay table is made, every member in a pay cell that

⁹Housing and subsistence allowance distribution data were derived from Department of Defense, OASD (FM&P) MM&PP, Directorate of Compensation, Selected Military Compensation Tables: January 1991 Pay Rates, A5; data as of 1 Jan 91.

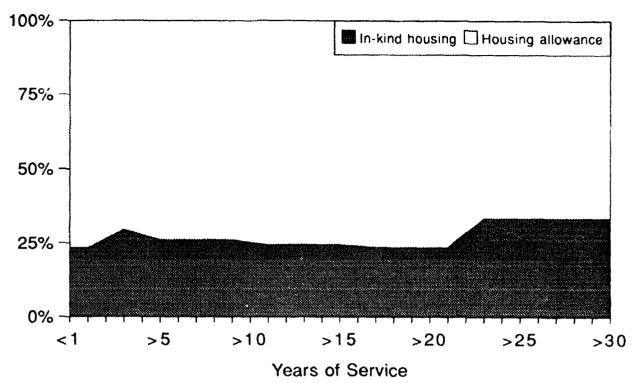

Figure 3-2. Officers' in-kind housing and housing allowance ratio

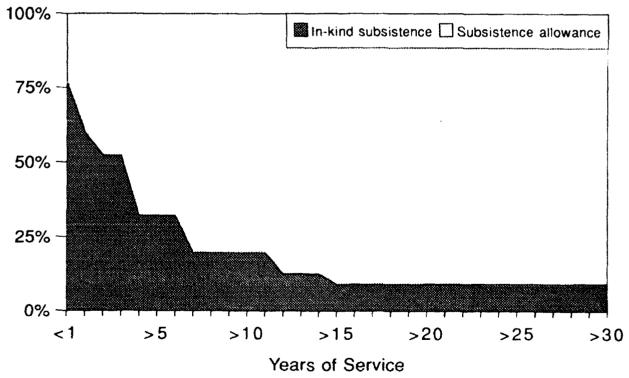

Figure 3-3. Enlisted members' in-kind subsistence and subsistence allowance ratio

is reduced would require save pay. So all transition options were developed to occur in conjunction with an annual pay raise, thus reducing the impact on these members and the requirement for as many save-pay provisions. There are, however, some cases that require special consideration. For example, the smoothing of longevity raises from 22 years to 28 years of service will require a special transition to preclude unintended lifetime earnings losses to retirement-eligible members otherwise caught in the transition.

Developing Transition Pay Tables

The one-year transition option incorporates all the changes discussed in the previous chapter when the annual pay raise is implemented on January 1, 1994.

The multi-year transitions are more complex and require developing tables for each of the mid-transition years. The last year of the transition (1995 for the two-year transition and 1996 for the three-year transition) is simply the one-year transition pay table increased to the final year based on the annual projected pay adjustments (i.e., projected ECI). In both multi-year transition options, the housing floor recommendation is completely incorporated in the first year. The QRMC feels that this important safety net for junior enlisted members is urgently needed and should not be phased in.

Computing the mid-year basic pay tables, which begin on January 1, 1994, requires several steps:

- First, the proposed and current basic pay tables are adjusted by the projected pay raises to the last year of the transition.
- Then, the total change in each pay table cell in the last year is divided by the number of transition years.
- Next, the resulting fraction for each cell is then decreased by the annual pay adjustments for the mid-years.
- Last, the reduced fractions for each cell are then added or subtracted to the appropriate current basic pay table projections for the mid-years in the transition.

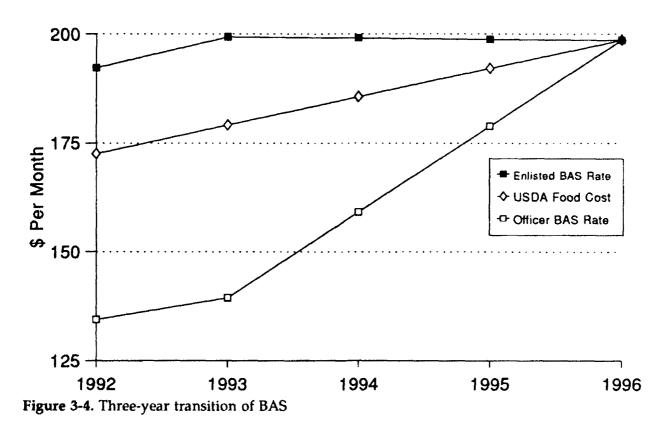

The BAS rates for the transition years are determined similarly:

- First, the difference between the USDA food cost and projected existing rates for BAS in the last transition year is determined for officers and enlisted members.
- This difference is then divided by the number of transition years.
- Finally, the fractional difference, multiplied by the year of the transition, is added to the current BAS rate projection in each transition year.

Table 3-1 provides the projected USDA food costs, current BAS rate projections, and transition BAS rates. Figure 3-4 displays the USDA food cost projections and transition BAS rates for officers and enlisted members for the three-year transition option.

Table 3-1. Transition rates for BAS

	1992	1993	1994	1995	1996
Projected USDA Food Cos	t				
	172.59	179.15	185.60	192.09	198.62
Current BAS projections					
Officers	134.42	139.39	145.39	151.35	157.40
Enlisted	192.25	199.36	207.93	216.46	225.12
Two-year transition phase-	in BAS rates				
Officers	134.42	139.39	165.76	192.09	
Enlisted	192.25	199.36	195.75	192.09	
Two-year transition BAS A	nnual Change				
Officers	£ 42	4.97	26.37	26.33	
Enlisted	7.75	7.11	-3.61	-3.66	
Three-year transition phase	e-in BAS rates				
Officers	134.42	139.39	159.13	178.83	198.62
Enlisted	192.25	199.36	199.10	198.80	198.62
Three-year transition BAS	Annual Change				
Officers	5.42	4.97	19.73	19.70	19.79
Enlisted	7.75	7.11	-0.26	-0.31	-0.17

The last step in developing the transition-year pay tables is to combine the BAS changes with the basic pay changes. The BAS differentials are added to or subtracted from the transition-year basic pay tables, accounting for enlisted members' tax advantage and the trade-off factors as described in the previous chapter.

ONE-YEAR TRANSITION

The major benefit of a one-year transition option is its immediacy: the impact of all the changes would occur at once, and the following year's pay raise would return to an equal percent for all members. However, a one-year transition would require the largest save-pay provisions, both in terms of number of members involved and total save-pay costs.

In this section, the percentage changes in basic pay and RMC under a one-year transition are examined for each of the four pay grade categories (enlisted members, officers, priorservice officers, and warrant officers). This analysis specifically focuses on members whose level of pay would decrease or increase by less than half of their otherwise projected pay raise.

Tables 3-2 and 3-3 show the percentage changes in the basic pay table and RMC from 1993 to 1994 for the one-year transition option. These percentage changes can then be compared to the projected pay raise of 4.3 percent.¹⁰ The outlined cells indicate where the increase in basic pay or RMC amounts to less than half the projected pay raise.

Enlisted Members

<u>Basic Pay</u>. As indicated in Table 3-2, enlisted members' basic pay raises will be larger than the projected 4.3 percent along the typical career path, with two exceptions.

First, enlisted members who have less than two YOS may realize slight increases or decreases in basic pay. Advancement through these cells is rapid, and these members will recover losses through gains in future income. However, even a short-term pay reduction was considered inappropriate. Therefore, the QRMC assumed that members entering the service will appropriately start with the restructured pay table, while save-pay provisions will be required for some members currently in the force.

Second, senior enlisted members who are at or near the over-26 year point may receive less basic pay and, hence, less retirement pay than anticipated. Members approaching the over-26-year point will receive a substantial pay increase from the new over-24 longevity raise, but the net benefit they receive will depend on how many months they have remaining before going over 26 YOS. Special consideration is appropriate for those members at or near the 26-year point to ensure they do not lose anticipated retirement income.

¹⁰Shaded areas on the enlisted and officer tables indicate typical career paths. The enlisted career path is based on DoD projected average promotion timing, and the officer career path is based on DOPMA promotion guidelines.

Table 3-2. One-year transition (1993 to 1994) basic pay raise (compare to 4.3 percent)

<u>Regular Military Compensation</u>. Table 3-3 shows the percentage changes in RMC. The raise in RMC is generally larger than the annual pay adjustment along most of the enlisted career path. Changes are slightly smaller than indicated on the basic pay table chart because of the \$22.33 reduction in BAS.

RMC levels for the lower-ranking enlisted members are noticeably higher. This is due entirely to the housing allowance floor. This increase, however, will not be realized as cash by the members who live in government quarters. The value of government quarters will have essentially risen to at least the floor level. Again, save-pay provisions will preclude any of these members actually losing any money.

Despite slightly higher increases in RMC for the senior enlisted members in the over-26 pay cell, they will still merit special consideration, as previously discussed.

Officers

<u>Basic Pay.</u> Table 3-2 indicates that basic pay changes adversely affect three groups of officers. The first group is new O-1s with less than one YOS. The impact on this group is minimized, however, by their prospect of a substantial pay raise within a year, when they reach the new over-1 pay raise. The second group is the senior O-2s and junior O-3s. This group bears the largest impact from a shift of money to the more senior O-3s and O-4s. Those who progress to O-4 will completely recover these reductions. Officers currently in these cells may require a multi-year transition or save-pay provision to reduce the negative impact. The third group is O-6s in, and approaching, the over-26 pay cell. The concern here, as with the senior enlisted members, is its effect on retirement pay.

Regular Military Compensation. The table showing basic pay change for officers omits a significant allowance increase that will affect most officers: it does not account for the \$40.21 monthly increase in BAS, which was funded from their basic pay, or the associated tax advantage. Table 3-3 shows that RMC increases by 5.22 percent for O-1s with less than one YOS. This increase is attributable both to the raise in BAS and to the changes in housing allowance. Thus, this group is actually better off and should not be of concern. On the other hand, although RMC increases by nearly 3.0 percent for O-6s at the over-26-year point, there is still concern here with retirement pay levels.

For the group of officers in the over-3 through over-6 pay cells, RMC growth shows improvement over basic pay, but some cells still show a pay loss. O-2s in the over-3 pay cell are the most adversely affected. They will, however, get a substantial raise when they are promoted to O-3, normally within a year. Until then, they should be protected from a pay loss with save pay.

Prior-Service Officers

The prior-service officer basic pay and RMC tables, because of their linkage to the bottom half of the officer tables, reflect similar patterns. Many of the pay table cells on the OE comparison tables are outlined in succession, which may be misleading. It should be noted that the outlined cells reflect only the number of pay cells affected, not the length of time a member is affected. Each member will be affected only once, when the recommended changes are implemented.

The RMC table for prior-service officers is a better measure of the impact than the basic pay table because they, like all officers, are normally entitled to cash allowances and will receive the \$40.22 (plus tax advantage) increase in BAS. Although the RMC table contains fewer outlined cells than the basic pay table, it still indicates that some officers will need pay loss protection.

Warrant Officers

The warrant officer table is affected much like the prior-service officer table. The subtraction of the money from warrant officers' basic pay to fund the increases in BAS makes it appear, when examining the basic pay changes, that many of these members will be adversely affected. However, examination of the RMC changes in Table 3-3 shows that only a few pay cells contain increases that amount to less than half the annual pay adjustment. The reduced over-2 and over-4 YOS cells are the result of shifting some dollars to the over-1 and over-3-year points.

MULTI-YEAR TRANSITIONS

Implementing the QRMC recommendations in a single year leads to decreases in some pay table cells and the need for save-pay provisions. Implementing changes over multiple years, in conjunction with annual pay raises, will eliminate these decreases. However, distributing smaller reductions over multiple years will prolong the time before some members receive a full annual pay raise.

Two and Three Year Transitions

A two-year transition will reduce the impact of the change by about half. That is, differences are halved between what the annual pay raise would have been if no change occurred and the amount of the raise under the one-year transition plan. For example, in the one-year transition, an O-1 in the under-1 YOS pay cell would get a 1.7 percent raise rather than the normal 4.3 percent raise; under the two-year transition, he or she would receive a 3.0 percent raise. The drawback is that members who move into that pay cell will have their raises reduced the next year.

Likewise, a three-year transition would provide a raise two-thirds higher, but prolong to three years the time before some pay cells are raised by the full annual pay adjustment. In pay cells where raises are higher than the projected annual pay adjustment, the effect would be the opposite (i.e., one-half or two-thirds lower). One distinct advantage of the three-year transition is that the enlisted member BAS rate could be held constant throughout the three transition years. This would eliminate the negative impact of lowering the enlisted BAS rate.

Effects of Multi-Year Transitions

Examination of multi-year transitions of varying lengths reveals that a transition of over three years is neither necessary nor desirable because of its prolonged effects. Because the effects of the two- and three-year transitions are similar, except for slight variance in dollar amounts, the remaining analysis of the multi-year option will focus on the three-year transition. Complete basic pay and RMC comparisons are included in Appendix B for the two-year transition and in Appendix C for the three-year transition.

Table 3-4 shows the basic pay changes for the first year of the three-year transition option. The number of outlined pay cells on this table is noticeably less than for the one-year transition. In fact, no cells have negative values. For senior members approaching retirement, both multi-year transition options would provide at least half of the otherwise projected pay raise. However, some junior enlisted members in their first year of service would receive less than half of the normal pay adjustment. Again, for these members, several raises through promotion or longevity can be expected during the first year, so the impact of the lower raise would be minimized. Additionally, those receiving a housing allowance will get a large pay increase as indicated by the RMC change (Table 3-5).

Table 3-5 shows RMC changes for the first year of the three-year transition. As stated earlier, this chart gives a better indication of the impact on pay for most members. It shows that O-2s over-3 YOS and OE-1s over-6 YOS, the most affected groups, will get hay raises equal to or slightly less than half of the projected annual adjustment. A transition of less than three years would require save-pay provisions for these members. No save-pay provisions would be required in a three-year transition for any pay cell.

MODIFIED ONE-YEAR TRANSITION

So far, tables have shown only the effects of using the same transition option throughout the table. Multi-year transitions may make sense only for selected cells in the pay table. In other words, this option would essentially be a one-year transition with a few selected cells being phased in under a multi-year plan.

Comparing the outlined cells of the various transition options shows which grade and longevity combinations can best benefit from a multi-year versus one-year transition. Table 3-6 shows the length of transition required and the comparative basic pay raises for these cells. Table 3-7 shows the comparative RMC raises. These tables show the pay raises for each cell over three years. Cells in the tables that are both outlined and shaded would be handled over three years; cells that are only outlined would be treated over two years, and the transition

Table 3-4. Three-year transition (1993 to 1994) basic pay raise (Year 1: compare to 4.3 percent)

pay table to the proposed pay rates as quickly as possible while minimizing negative impacts on service members. Although it significantly reduces the save-pay requirements over the one-year option, it nonetheless, costs considerably more.

SPECIAL CONSIDERATIONS

Even applying multi-year transitions to selected pay cells could leave some members decidedly less well off. This is the case for members near the 26-YOS point. They may be anticipating and planning for retirement based on the extremely large longevity raise in the current pay table. While the magnitude of this raise makes no sense today, members near it should not lose the raise just because the pay table is being restructured. The most equitable solution is to simply delay the proposed change in the over-26 raise for two years. This will ensure that any current member with 24 or more years of service will be able to achieve the full anticipated level of the current over-26 raise. Any member with less than 24 years of service will realize the full value of the new over-24 longevity raise and essentially have been better off during the transition to the structure of the new pay table.

COSTS

Cost estimates were made for each of the QRMC proposals using 1994 as the base year. We used the projected pay raises for FY 1994 through FY 1996 in developing the estimates. To facilitate comparing the various transition options, we used the FY 1994 projected force strength and held it constant for FY 1995 and FY 1996. Table 3-8 shows the estimated costs for a one-, two-, and three-year transitions, as well as the modified one-year transition.

Separate costs are shown for the combined components of RMC and the total of all QRMC proposals including Special and Incentive Pays and Continental United States Cost of Living Allowance (CONUS COLA). The FY 1994 costs reflect a 1 January 1994 start in conjunction with the

annual pay raise. Note that while the save-pay costs are small in the modified one-year option, this is by far the most expensive option. Practically no savings are realized in the pay table during the first year, because the option was developed to disadvantage the absolute minimum number of service members. The additional \$150 million cost above the straight one-year option ensures that virtually every member will get a pay raise on 1 January 1994.

PROS AND CONS OF TRANSITION OPTIONS

We present the options as a menu of feasible choices and compare the alternatives on their ability to hold members harmless, control cost, and minimize disruption to the annual pay adjustment process. Our transition options differ in three crucial ways as shown in Table 3-9.

Table 3-9. Transition Criteria

Transition Alternative	Adverse Impact on Current Members	Cost	Disruption
One-Year	Moderate	Moderate	Low
Modified One-year	Low	High	Low
Two-Year	Moderate	Moderate	Moderate
Three-Year	Low	Low	High

The modified one-year option is by far the most expensive. The two-year option would cost less than the one-year plan, but still more than the three-year option. Although the three-year option is the least expensive transition plan, it takes the longest to achieve the benefits of the new structure and keeps the system in a state of flux the longest.

All of the options rely on the annual pay adjustment process. The mathematical adjustments in the pay table require an overall annual increase of at least three percent. Any lower level will not provide the range of values necessary to adjust all individual pay cells. Recent economic trends indicate that the ECI may drop below three percent in the near future. If that should happen while we are in the middle of a multi-year transition, it could result in a malaligned pay table with an incomplete, intermediate structure.

The 7th QRMC recommends that the one-year transition be used to implement our near-term proposals. The value of completing the transition in a single year outweighs the costs. All disruption and turbulence will be put behind us within a few months, with no possibility of the plan being derailed in a subsequent transition year.

SUMMARY

It is feasible to implement our near-term recommendations beginning in January 1994. Transition options ranging from one to three years in length have been developed to control costs and prevent current members from experiencing pay cuts. They differ in three ways that are important for policy-makers: cost, adverse effects on members, and disruption of the normal pay adjustment process. Generally, longer transitions to new pay elements have lower costs and less impact on current members, but entail the greatest disruption to the pay process. The 7th QRMC recommends the one-year transition plan.

INTEGRATION AND TRANSITION
